

# Agent Agronomy Update NE and SE Corn and Sorghum Weed Management

Curtis Thompson, [cthompso@ksu.edu](mailto:cthompso@ksu.edu)

Office: 785-532-3444

# Agronomy Department Update

- **Gary Cramer, Hutchinson Field manager will retire end of December, 2017**
- **Thompson, Extension Weed Science, will retire, last day of employment July 18, 2018 – yes will still do meetings**
- **Hiring is frozen at the moment: position openings**
  - Vice Mengel – research, teaching, and extension in nutrient management
  - Vice Cramer – Hutchinson Field Manager
  - Vice Thompson – Extension/Research Weed management in field crops, corn and sorghum
- **New weed scientist hired at Hays, Dr. Vipen Kumar**
  - Strong background in herbicide resistant weeds, kochia, winter wheat. Comes to us from Montana State Univ.

# **Corn and Sorghum Update 2018**

- Enlist Duo – we now have corn hybrids
- New dicamba products
- Liberty rate increase for corn
- Mesotrione off patent
- Harness Max
- Anthem formulation changes
- Anthem Flex
- Halex GT for sorghum
- Controlling weeds in sorghum (salvage scenario)
- Inzen Z sorghum (do I have to)

**Herbicide registered for Enlist corn, Enlist soybean (lack Chinese approval for import), and Enlist cotton**

Dow AgroSciences

**Enlist Duo™  
Herbicide**

GROUP

4

9

HERBICIDES

# **Enlist Duo Herbicide for Enlist Corn Hybrids**

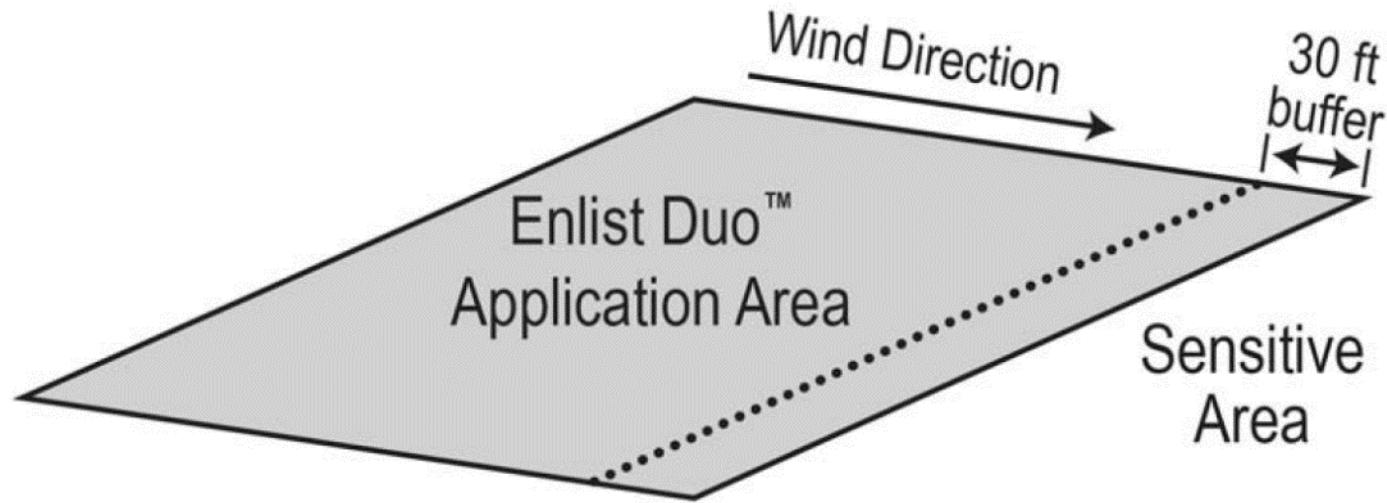

- Contains 1.7 lbs glyphosate acid (9) and 1.6 lbs of 2,4-D ae (4).
  - Colex-D technology: Dimethylamine salt of glyphosate and a choline salt of 2,4-D.
- Use 3.5 to 4.75 pts /acre to corn no larger than V8 or 30 inches tall.
- Make 1 to 2 post applications with a minimum of 12 days between applications.
- May be used PRE or POST, however, total application can not exceed 14.25 pints of Enlist Duo / acre / use season
- DO NOT aerially apply Enlist Duo

## Nozzle Selection

The following chart details nozzles and pressure that are allowable for use when applying Enlist Duo herbicide. Do not use any nozzle and pressure combination not specifically allowed in the chart.

		Maximum Operating Pressure (psi)											
		10	20	30	40	50	60	70	80	90	100	110	120
Manufacturer	Model												
GreenLeaf	ABJ11004			MAX 40									
	ABJ10006			MAX 30									
	TDXL11003				MAX 40								
	TDXL11004					MAX 45							
	TDXL11006							MAX 75					
	TDXL11003-D								MAX 90				
	TDXL11004-D								MAX 90				
Hypro	TDXL11006-D									MAX 100			
	TDXL11008-D									MAX 80			
Lechler	ULD12004						MAX 70						
	ULD12006					MAX 50							
TeeJet	ID11004				MAX40								
	ID11005					MAX 60							
	AI11004						MAX 60						
	AI11006						MAX 60						
	AI11008							MAX 70					
	AITTJ60-11006			MAX 40									
	AIXR11003			MAX 30									
Wilger	AIXR11004				MAX 40								
	AIXR11006				MAX 40								
	TTI11004							MAX 85					
Wilger	MR11006					MAX 60							
	MR11008						MAX 60						

# Protection of sensitive areas or state restrictions which ever is most restrictive

At the time of application, the wind cannot be blowing toward adjacent commercially grown tomatoes or other fruiting vegetables (EPA crop group 8), cucurbits (EPA crop group 9), grapes, or cotton.

# **New *Dicamba* (4) products labeled for corn and sorghum.**

- **Xtendimax and FeXapan (Clarity with vapor grip technology to minimize volatility).**
  - Corn 11 to 22 fl oz/a applied PRE or post
  - Sorghum up to 11 fl oz/a PRE (10 days before planting) or POST 2 to 5 leaf stage but before it's 8 inches tall
- **Engenia (BAPMA salt)**
  - Corn; 6.4 to 12.8 fl oz applied PRE or post
  - Sorghum; up to 6.4 fl oz PRE (10 days before planting) or POST 2 to 5 leaf stage but before it's 8 inches tall

# *Liberty* (10) label changes for corn

- Use 22 to 43 fl oz / acre to Liberty Link corn up through the V6 stage.
- Maximum Liberty / acre / season is 87 fl oz.

# ***Mesotrione (27) for PRE and POST in corn or PRE to sorghum***

- Mesotrione is the active in Callisto and is off patent.
- Generics and Callisto currently are all 4 lb ai/gallon.
- Callisto was > \$5 / fl oz
- Current price of mesotrione generics < \$2 / fl oz
- Incinerate, BL4, Explorer, Tenacity, Bridle, Willowood Mesotrione and many others!
- \$8 to \$12 / acre (4 to 6 fl oz) of mesotrione added to a chloroacetamide+atrazine will provide much improved control of broadleaf weeds compared to the chloroacetamide+atrazine alone. Will enhance control of pigweeds, velvetleaf, kochia, and others

# ***Harness Max, for all corn, Monsanto***

- Acetochlor (15) (3.52 lb) + mesotrione (27) (0.33 lb) per gallon
- **1.72 to 2.75 qt/a**
  - Acetochlor - 1.5 to 2.4 lb/a (27.4 to 44 fl oz Harness)
  - Mesotrione – 0.142 to 0.227 lb/a (4.5 to 7.2 fl oz Callisto)
- **PRE**
- **Coarse        55 to 64 fl oz**
- **Medium      64 to 75 fl oz**
- **Fine           64 to 75 fl oz < 3% OM, else 75 to 88 fl oz**
- **POST – up to 11 inch tall corn**
- **Coarse        40 to 55 fl oz**
- **Medium      55 to 64 fl oz**
- **Fine           55 to 64 fl oz < 3% OM, else 64 to 75 fl oz**

# *Anthem* formulation changes FMC

- *Anthem Maxx*
- Pyroxasulfone (15) 4.174 lb/gal
- Fluthiacet-methyl (14) 0.126 lb/gal
- Total ai 4.3 lb/gal
- (Old) *Anthem*
- Pyroxasulfone 2.087 lb/gal
- Fluthiacet-methyl 0.63 lb/gal
- Total ai 2.15 lb/gal

# *Anthem Flex*, FMC, for corn, cotton, wheat

- Pyroxasulfone (15) 3.733 lb + Carfentrazone (14) 0.267 lb/gal
- Use 3.5 to 7.3 fl oz early preplant 15 to 45 days before corn planting
- Or 2.75 to 7.3 fl oz prior to corn emergence (no post use)
- FL oz/a use rate for all field corn, popcorn, or on sweetcorn planted on medium soils with >2.0% OM or on fine soils.
- | OM%  | Coarse   | Medium  | Fine     |
|------|----------|---------|----------|
| <1%  | 2.75-3.5 | 3.0-4.5 | 3.5-4.5  |
| 1-3% | 3.0-4.0  | 3.5-5.5 | 4.5-6.0  |
| >3%  | 4.0-5.0  | 4.5-6.0 | 5.5-7.28 |

# Halex GT, Syngenta

- Now labeled Preemergence on grain sorghum
- Use rates are 4 to 6 pints/acre
- |                | mesotrione         | S-metolachor | atrazine |
|----------------|--------------------|--------------|----------|
| • Rate / acre  | -----lb ai/a ----- |              |          |
| • Hx GT 4pt    | 0.105              | 1.05         | 0        |
| • Hx GT 6pt    | 0.157              | 1.57         | 0        |
| • LmxEZ2.7qt   | 0.168              | 1.68         | 0.63     |
| • LxrEZ 3.0 qt | 0.165              | 1.30         | 1.30     |

# Atrazine registration!

- Continues to be on track
- Off target movement into watersheds may change requirements on the label. Remains to be seen.
- Will not be completed for the 2018 season.

# **Best Management Practices for Atrazine**

**KSU publication MF-2182**

- Incorporation reduces losses 67%
- Apply atrazine prior to April 15, reduce losses 50%
- Split applications, 2/3 rate in March and remainder after planting. Reduce losses by 33%
- Use to low atrazine rate PREmixes. Ie “Lite” formulations
- Use POST vs PRE applications of atrazine. Lower rates used POST. Can reduce losses by 67%
- Reduce PRE atrazine rates to 1 pound or less followed by POST 0.5 lb if needed. Combined applications improve control.
- Use other herbicides without atrazine. Can reduce losses by 100%
- Vegetative filter strips reduce flow rate and reduce losses by 50%
- Buffer zones. Avoid applications near water sources and environmentally sensitive areas.

## Effect of herbicide programs applied late to sorghum 15 to 18", on sorghum yield and weed control. 7 year avg. Thompson and Peterson.

**Acuron™**

**For corn (grain or silage), Syngenta**

- **Atrazine 1.0 + bicyclopyrone 0.06 + mesotrione 0.24 + S-metolachlor 2.14 lb/gallon**
- **Use rate 2.5 qt on soils < 3% OM and 3 qt on 3% OM or more with a maximum of 3 qt / year.**
- **Apply from 28 days prior to planting to 11 (prior to 12) inch tall corn.**
- **If applied POST to corn and weeds, used NIS at 0.25% v/v. COC can be used up to 1% v/v but will increase the risk of crop injury. DO NOT use MSO, AMS, or UAN.**

**Acuron®Flexi**

## For corn (grain, silage, seed, sweet, and yellow pop), Syngenta

- **Bicyclopyrone 0.08 + mesotrione 0.32 + S-metolachlor 2.86 lb/gallon**
- **Use rate 2.0 qt on soils < 3% OM and 2.25 qt on soils with 3% OM or more with a maximum of 2.25 qt / year.**
- **Apply from 28 days prior to planting postemergence from emerged to 30 inches tall or up to the 8-leaf stage on field, silage, and seed corn only.**
- **If applied POST to corn and weeds, used NIS at 0.25% v/v. COC can be used up to 1% v/v but will increase the risk of crop injury. DO NOT use MSO, AMS, or UAN. Do not apply postemergence to sweet or pop corn!**

## ***Anthem Maxx/Anthem Flex (FMC) for all corn types***

- **Anthem Maxx – pyroxosulfone (15) + Fluthiacet (14)**
  - 45 days before planting up to 4 visible collars
  - 2.5 to 6.5 fl oz
- **Anthem FLEX – pyroxosulfone (15) + Carfentrazone (14)**
  - 45 days before planting up to postplant preemergence
  - 3.0 to 7.7 fl oz

## **Armezon PRO (BASF) for all Corn**

- Dimethenamid-P (Outlook-15) 5.25 lb + topramezone (Armezon-14) 0.1 lb / gallon
- Apply PRE or POST to corn up to V8 or 30 inches tall. Use directed application when corn is 12 to 30 inches tall.
- USE rates are 14 to 24 fl oz/a depending on soil texture (coarse vs Med & Fine) and organic matter less than 3% or 3% and greater. 14 to 16, 16 to 20, 16 to 20, 20 to 24.
- When applying POST use MSO, COC, HSOC at 0.5 to 1% v/v or NIS at 0.25 to 0.5% v/v. Add a nitrogen fertilizer UAN at 1.25 to 2.5% v/v or AMS at 8.5 to 17 lb/100 gal
- Can be tankmixed with other corn herbicides. Will be synergized by atrazine.
- Did observe crop injury with oil type adjuvants and atrazine

# **Introducing a New Weed Control Technology for Grain Sorghum**

**Curtis Thompson  
Extension Weed Science  
KSU Agronomy**

**Twitter:@KStateAgron,@cthompso56**

**Email: cthompso@ksu.edu**

# Inzen Z sorghum development

- ALS resistant sorghum lines were developed at KSU
- ALS resistant shattercane from SW Kansas was crossed with grain sorghum lines (Tuinstra and Al-Khatib)
- Several ALS resistant lines were distributed by K-State to all sorghum breeding programs
- Currently Pioneer and Advanta have agreements signed with DuPont (Owner of this new technology) and will produce & market hybrid Inzen Z sorghum

# **Zest WDG (DuPont) for Inzen sorghum**

- **Nicosulfuron 75% WDG, 0.67 to 1.33 oz prod./a**
- **0.25 to 0.5% v/v NIS or 1% v/v COC**
- **2 qt/a UAN or 2 lb/a AMS**
- **Apply to sorghum 5 collar to flagleaf visible, 4 to 20 inch sorghum.**
- **Annual grass control varies with species and size of the grass at application.**
- **Start with an effective PRE applied herbicides.**
  - **Zest should be the second part of a two pass system.**

# Maximum grass species height

## WEEDS CONTROLLED IN INZEN™ GRAIN SORGHUM

Weeds controlled with 0.67ounces (0.032 pounds of nicosulfuron active ingredient) ZEST™ WDG herbicide.

Grasses	Maximum Height or Diameter
Barnyardgrass†	4"
Broadleaf signalgrass	2"
Crabgrass (large)*	2"
Foxtails (bristly, giant†, green†, yellow†)	4"
Itchgrass	6"
Panicum (Texas, browntop) fall	3" 4"
Ryegrass (Italian, perennial) †	6"
Sandbur (field, longspine)*	3"
Wild oats†	4"
Wild proso millet	4"
Witchgrass	6"

† Naturally occurring resistant biotypes are known to occur. If weed escapes occur, treat with an herbicide having a mode of action other than Group 2 and/or use non-chemical methods to remove escapes, as practicable, with the goal of preventing further seed production.

\* Refer to Specific Weed Instructions Section of this Label

# *Zest WDG* Restrictions

- Can be tankmixed with 2,4-D LV, dicamba, atrazine, Starane Ultra, and Ally XP, 1/20 oz.
- DO NOT USE COC when tankmixing 2,4-D or dicamba.
- DO NOT tankmix with Huskie herbicide as significant grass antagonism may result.
- Rotation back to sorghum is 18 months
  - NOT CONTINUOUS SORGHUM!

# Zest WDG Rotation Restrictions

The following rotational intervals should be observed when using ZEST™ WDG at a maximum of 1.33 ounces:

## ZEST™ WDG ROTATIONAL CROP GUIDELINE - 1

### *No soil pH restrictions*

Rotational Crop	Interval in Months
Corn (field, seed)	Anytime
Corn (pop, sweet)*	10
Soybeans	0.5 (15 days)
Cereals, spring (barley, oats, rye, wheat)	8
Cereals, winter (barley, oats, rye, wheat)	4
Cotton	10
Dry Beans, Peas, Snap Beans	10
Alfalfa**	12
Red Clover**	12
Sorghum (All types including hybrids containing the INZEN™ trait)	18
Other Crops	See Rotational Crop Guidelines 2 and 3

\* Except the sweet corn varieties "Merit", "Carnival", and "Sweet Success", for which the minimum time interval is 15 months.

\*\*Except for the state of Kansas east of Highway 75, for Minnesota east and south of the Red River Valley and for the states east of the line formed by the western borders of Iowa, Missouri, Arkansas, and Louisiana, where the minimum time interval is 10 months.

## ZEST™ WDG ROTATIONAL CROP GUIDELINE - 2

### *With soil pH ≤7.5 restrictions*

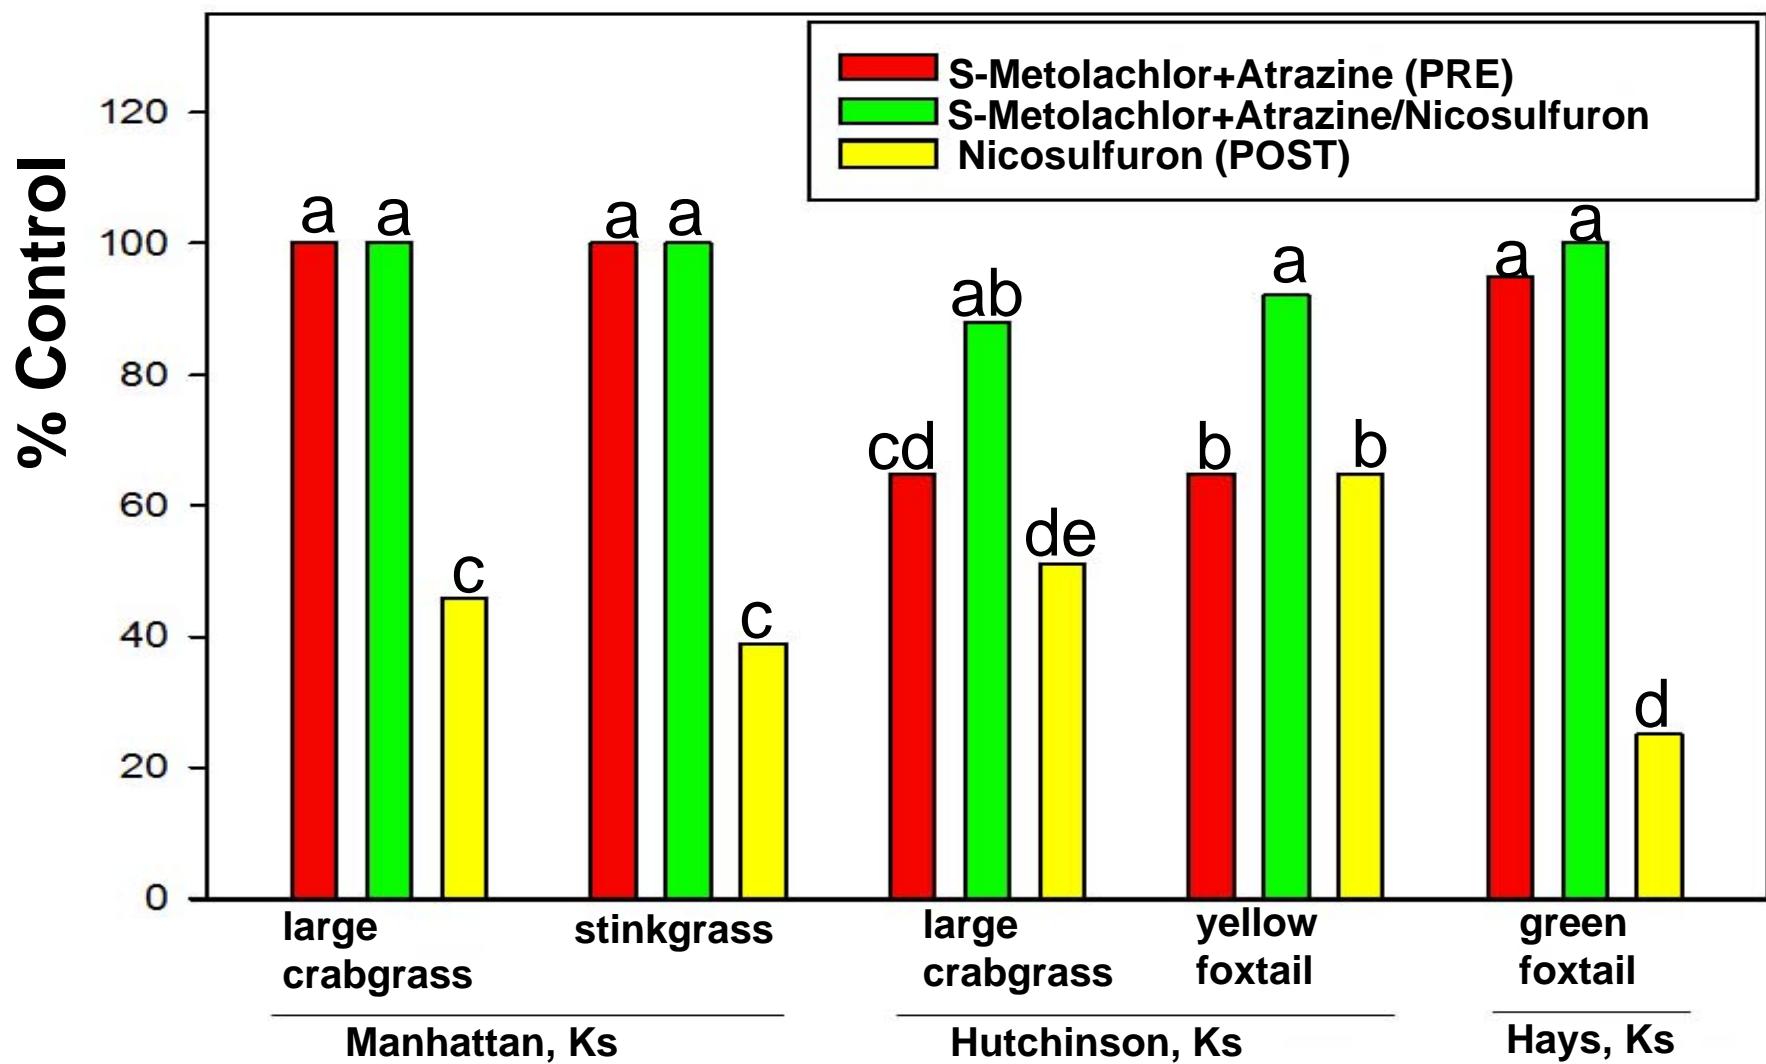

Crop	Rotational Interval in Months	
	pH 7.5	pH > 7.5
Sunflowers	11**	18
All other crops not listed in Rotational Guidelines 1 or 2	See Rotational Guideline 3	

\* Except in Texas and Oklahoma east of Highway 281, where the rotational interval is 10 months, regardless of pH.

\*\*Precipitation following application must exceed 14" prior to planting sunflowers.

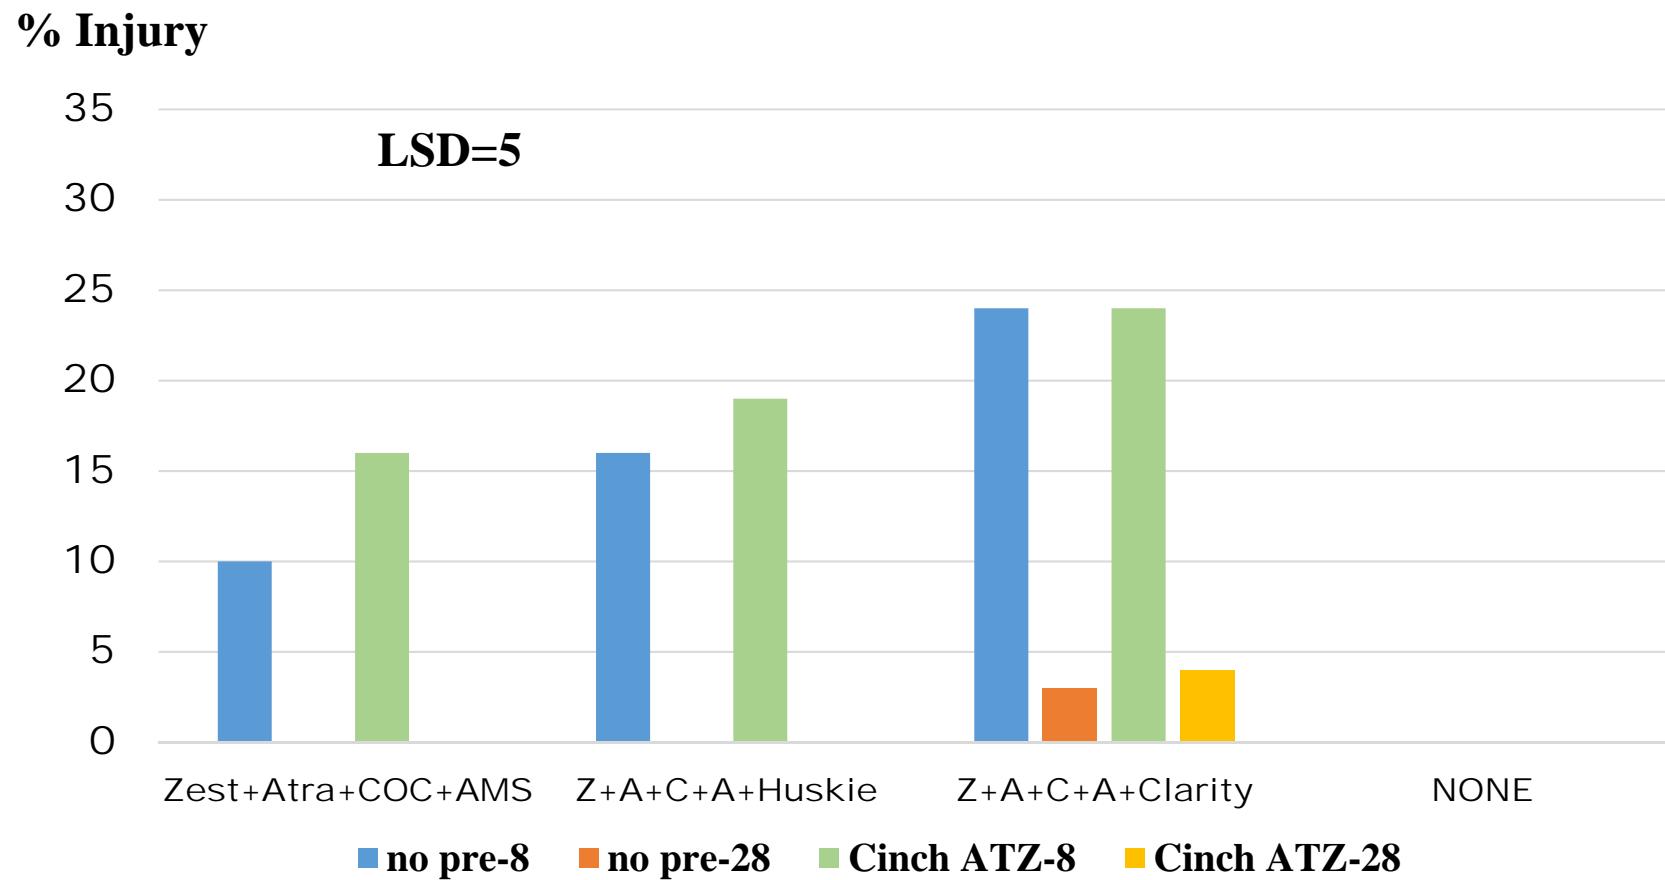

# Weed control in ALS sorghum

- All experiments established on small plots
- All herbicides were applied with COC or NIS (Clarity trts) and ammonium sulfate
- Grass and broadleaf herbicide combinations were evaluated
- All weed control ratings were visual evaluations

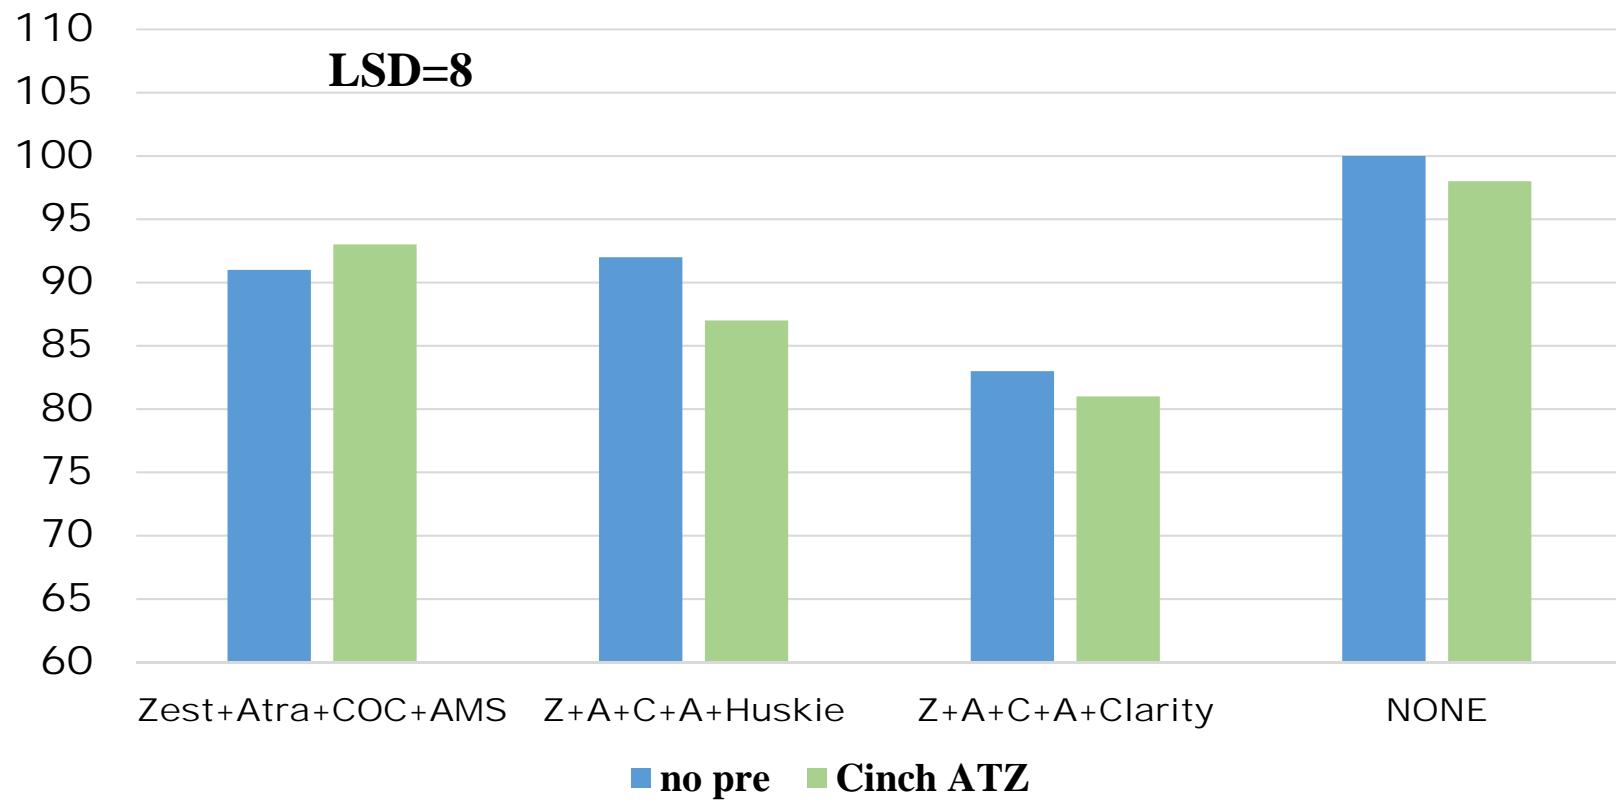

Annual grass control with 3 herbicide programs at 3 locations, Vanloenen et al 2015.

## ***DiFlexx Duo (Bayer Crop) for all Corn and in fallow***

- Diglycolamine salt of dicamba 1.86 lb ae/gal + Laudis 0.27 lb/gal+ Safener - This CSA safener has soil and foliar activity
- Use 24 to 49 fl oz/A may be applied preplant, preemergence to field, silage, seed, and pop corn up through V7 stage. With drop nozzles can be applied up to corn at the V10 stage or 36 inch tall.
- At MSO or COC at 1% v/v when applied alone or tankmixed with atrazine.
- AMS or UAN is recommended in the label.
- **NOTE the addition of AMS or UAN will increase the risk of dicamba volatility!**

# *Kochiavore* , Winfield Solutions

- **2,4-D (4) LV 1.67 ae lb, bromoxynil (6) 1.67 lb, & Fluroxypyr (4) 0.67 ae lb/gallon**
- Broadleaf weed control including kochia.
- Use 1 to 1.5 pints in corn Preplant, minimum of 7 days ahead of planting, or post plant preemergence to no-till planted corn, or postemergence, v3 to v5. Postemergence to grain and forage sorghum v4 to the pre-boot stage. Kochiavore will cause crop injury. Can be applied up to 2.5 pints on fallow. Maximum is 3 pints/a for growing season.
- Do not feed or graze corn for 47 days following application or harvest grain for 90 days of application. Do not harvest grain within 70 days of application or allow meat or dairy animals to consume fodder, forage, or graze for 45 days following application to sorghum. Do not allow livestock to graze fallow that has been treated with Kochiavore.

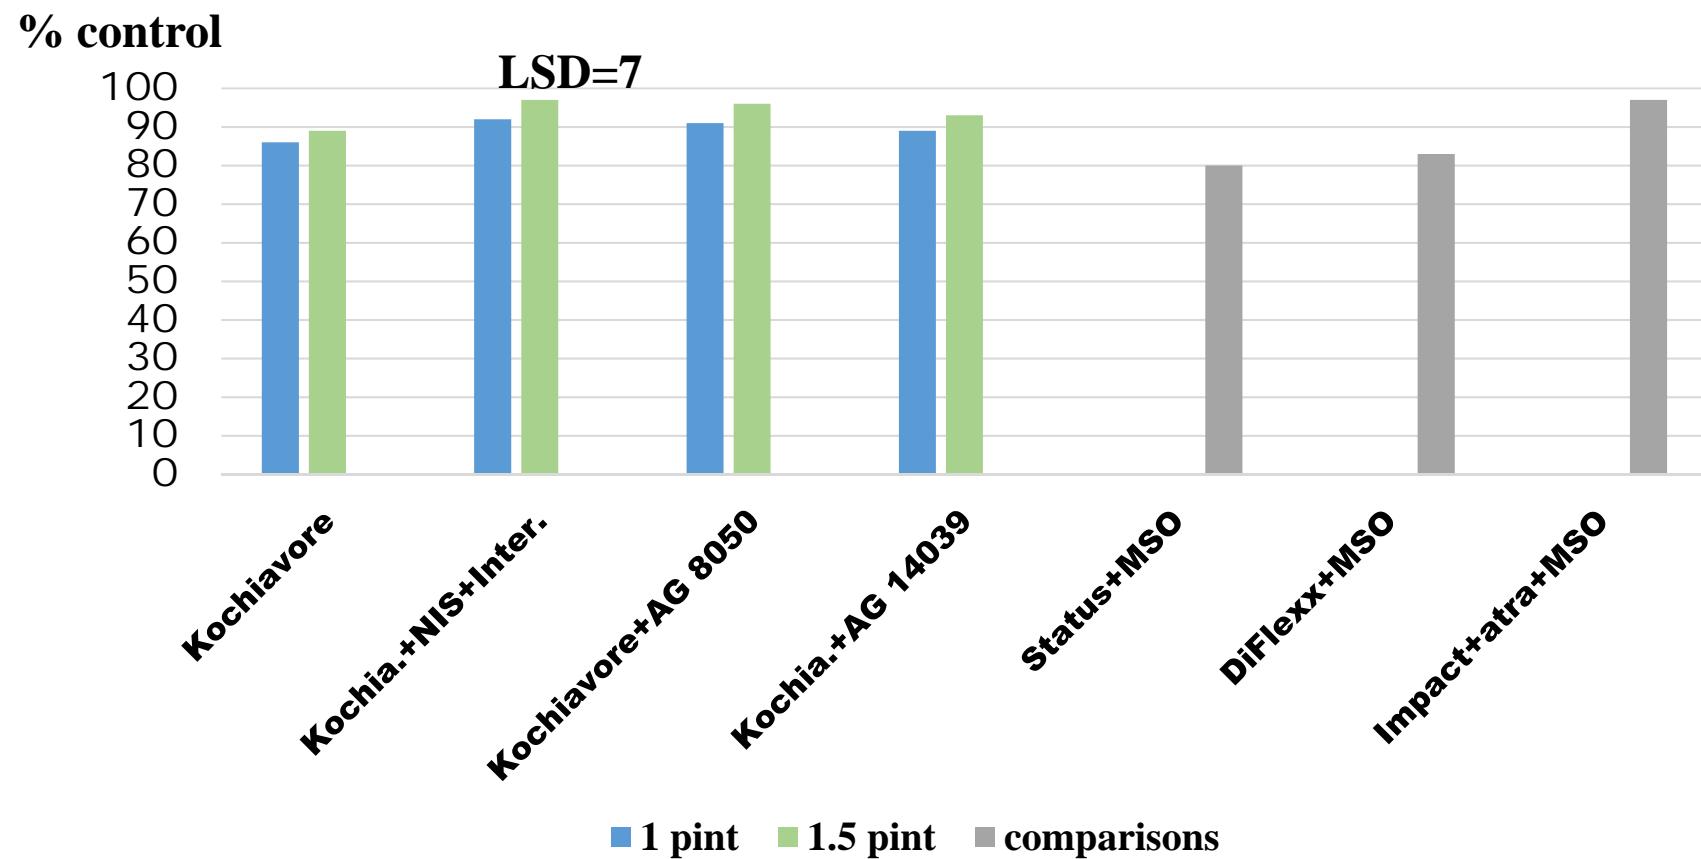

**Corn injury 4 weeks after post applications,  
Tribune KS. Thompson, Schlegel, and Peterson.  
1613cornTR.**

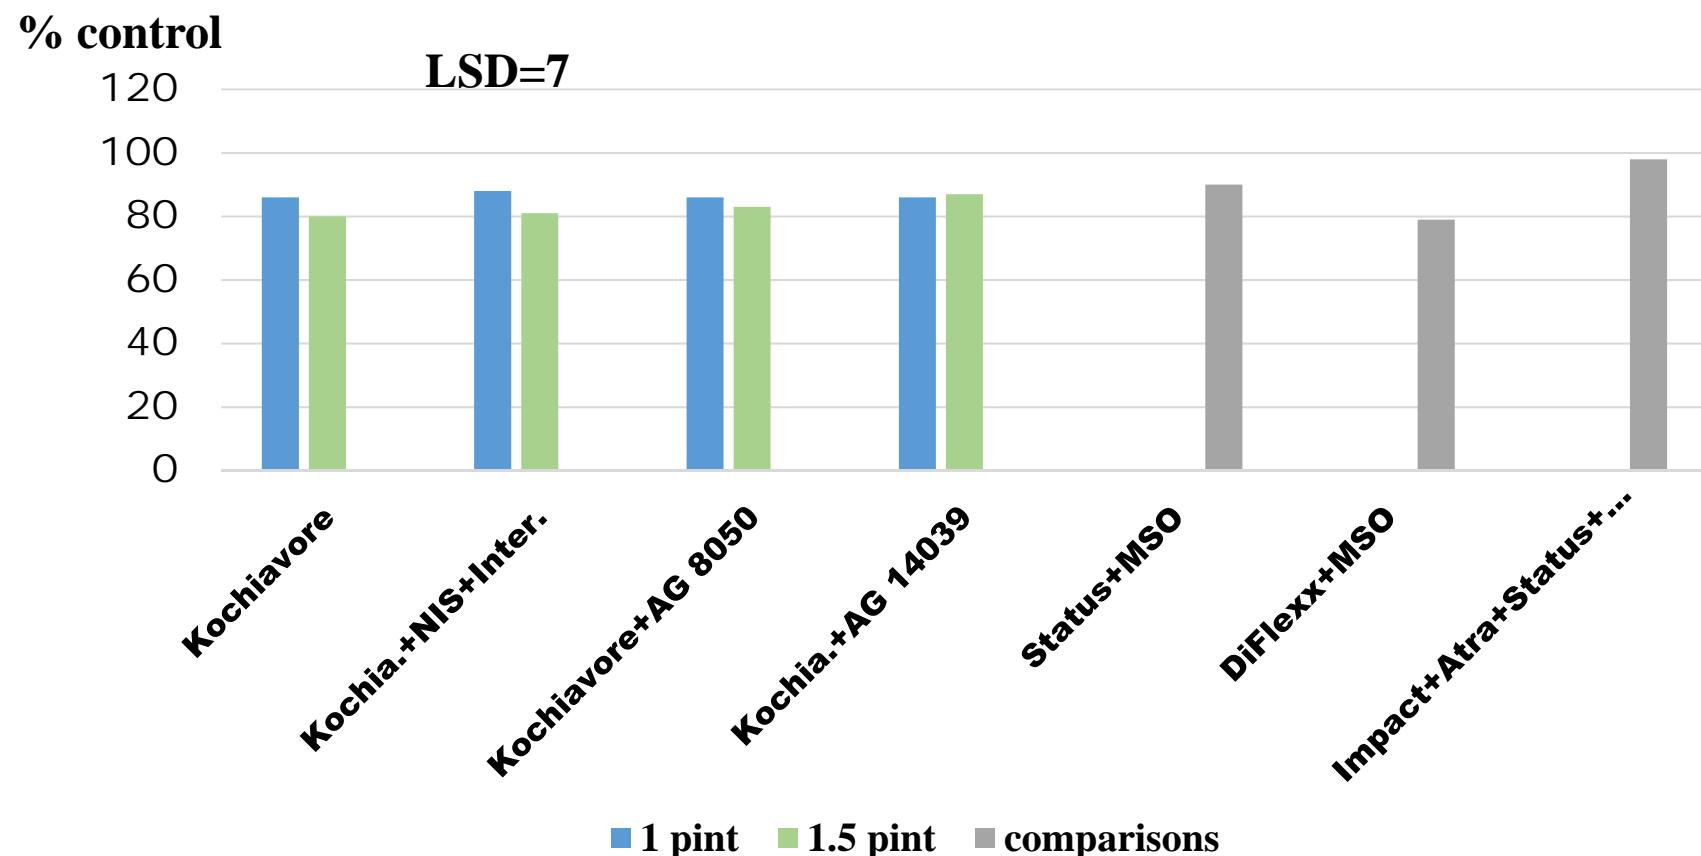

# Kochiavore effect on corn yield, Tribune KS. Thompson, Schlegel, and Peterson. 1613cornTR.

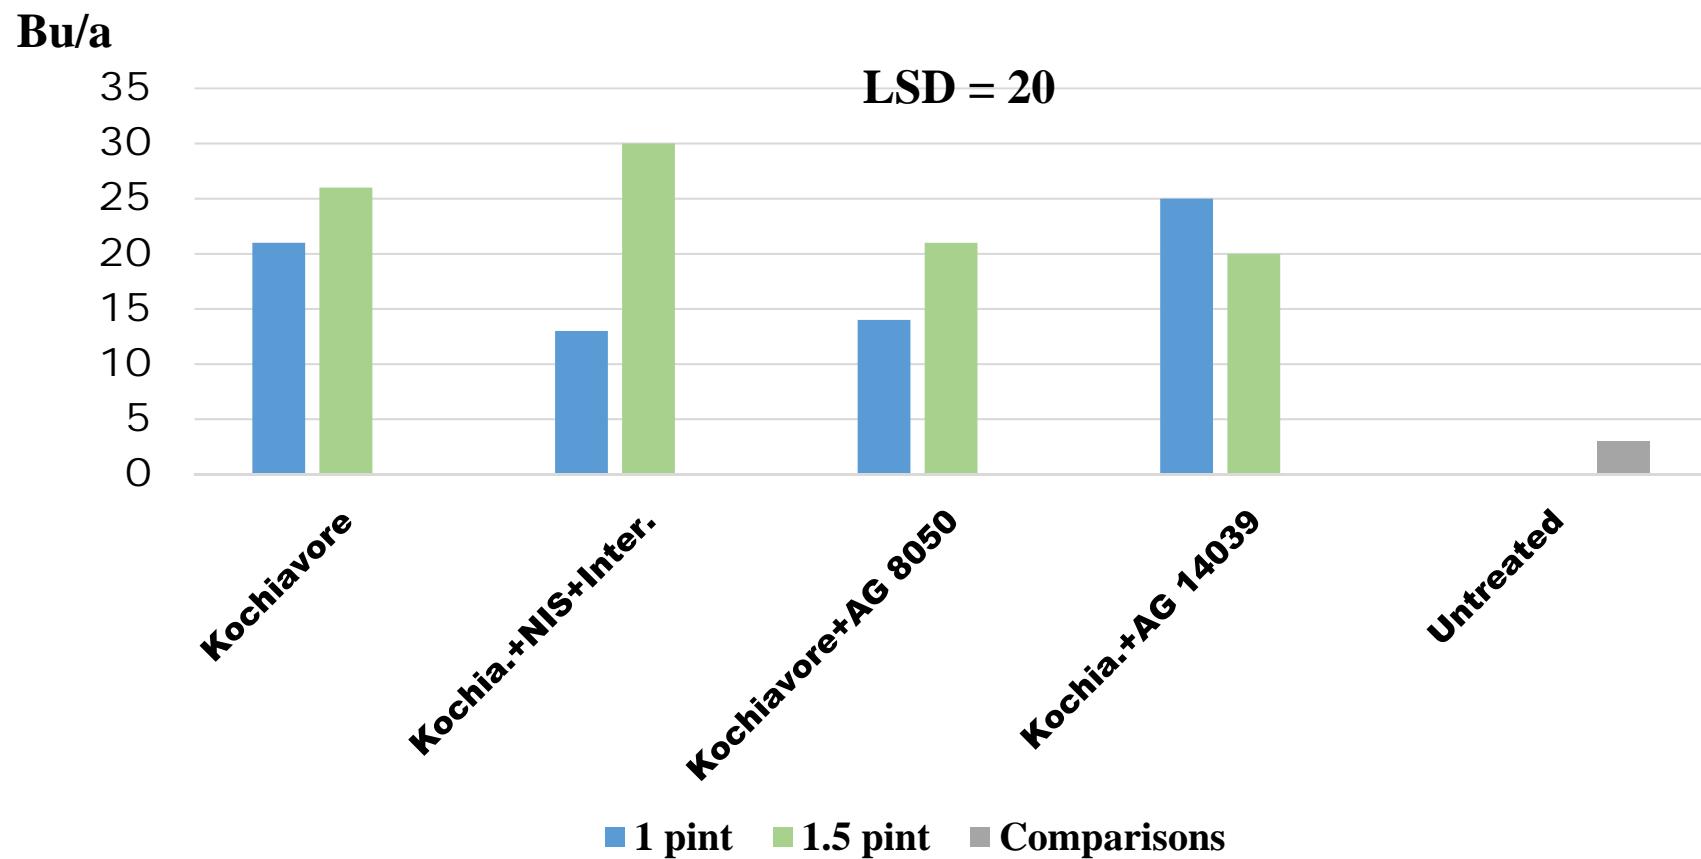

# Kochia control 4 weeks after post applications, Tribune KS. Thompson, Schlegel, and Peterson. 1613cornTR.

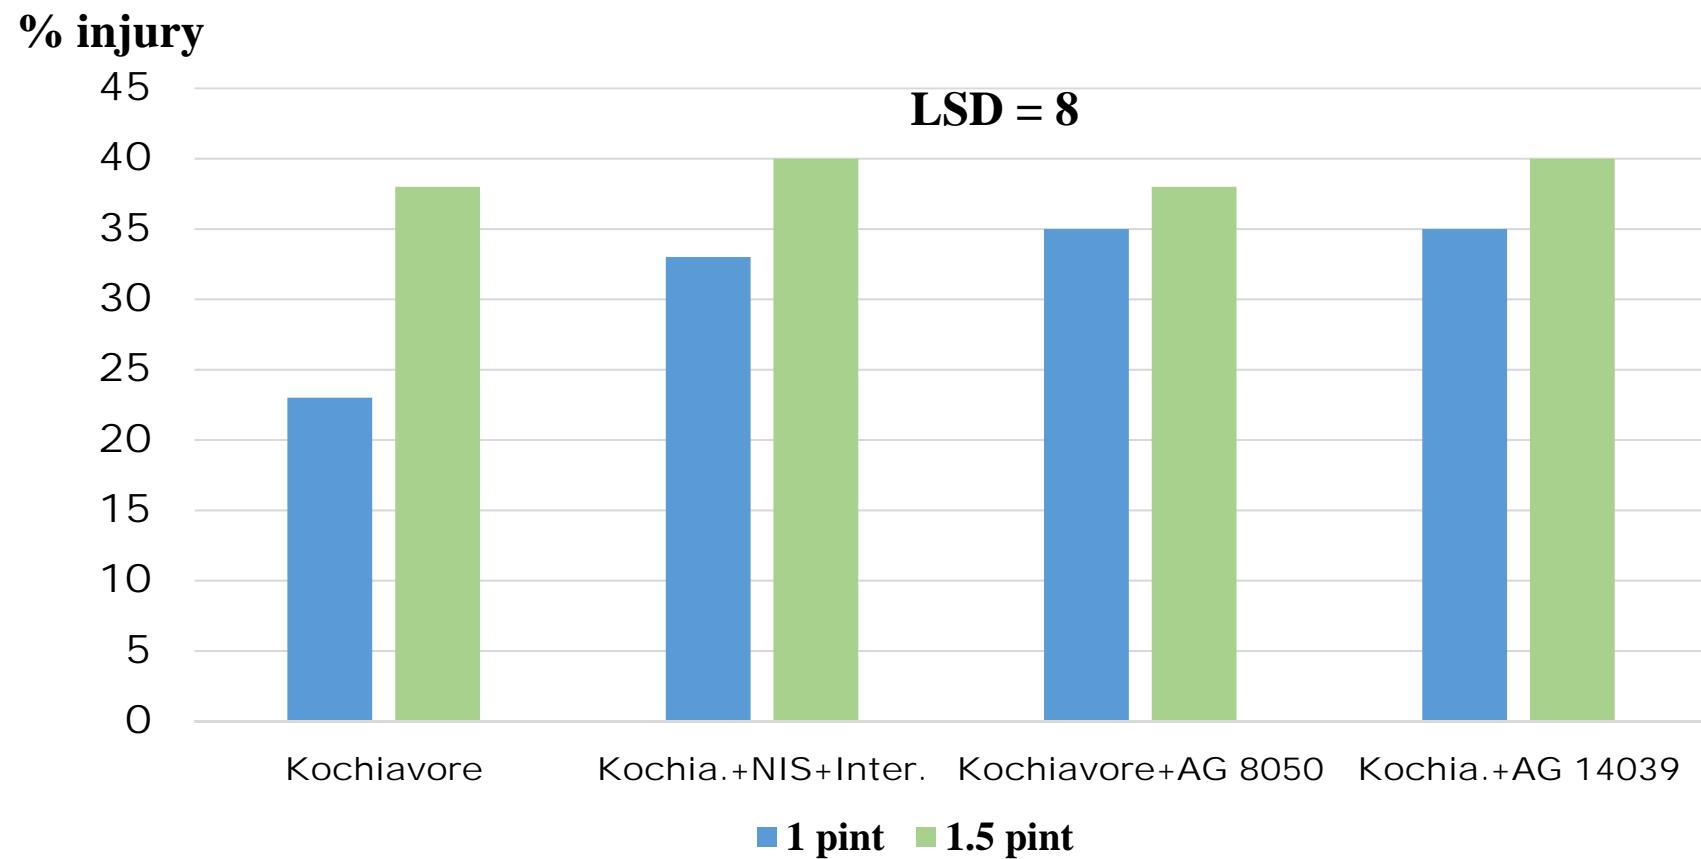

# Palmer amaranth control 4 weeks after post applications, Tribune KS. Thompson, Schlegel, and Peterson. 1613cornTR.

# Kochiavore effect on sorghum yield, Manhattan KS. Thompson and Peterson. 1739sorg.

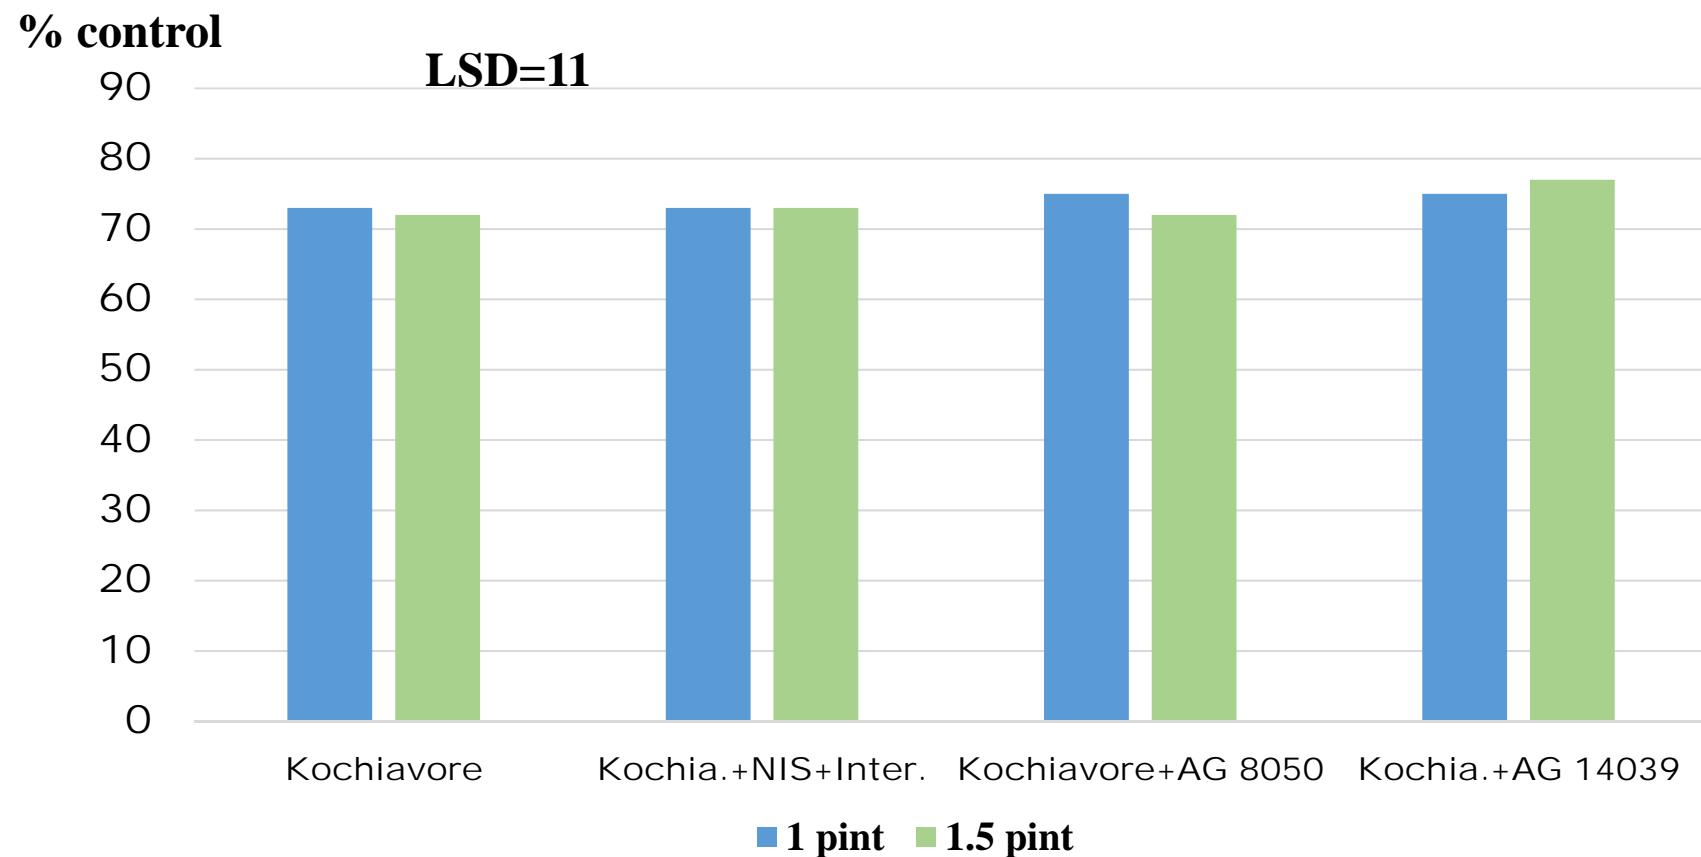

# **Sorghum injury 2 weeks after post applications, Manhattan KS. Thompson and Peterson. 1739sorg.**

**Four weeks after application injury was zero for all treatments.**

# **Palmer amaranth control 4 weeks after post applications, Manhattan KS. Thompson and Peterson. 1739sorg.**

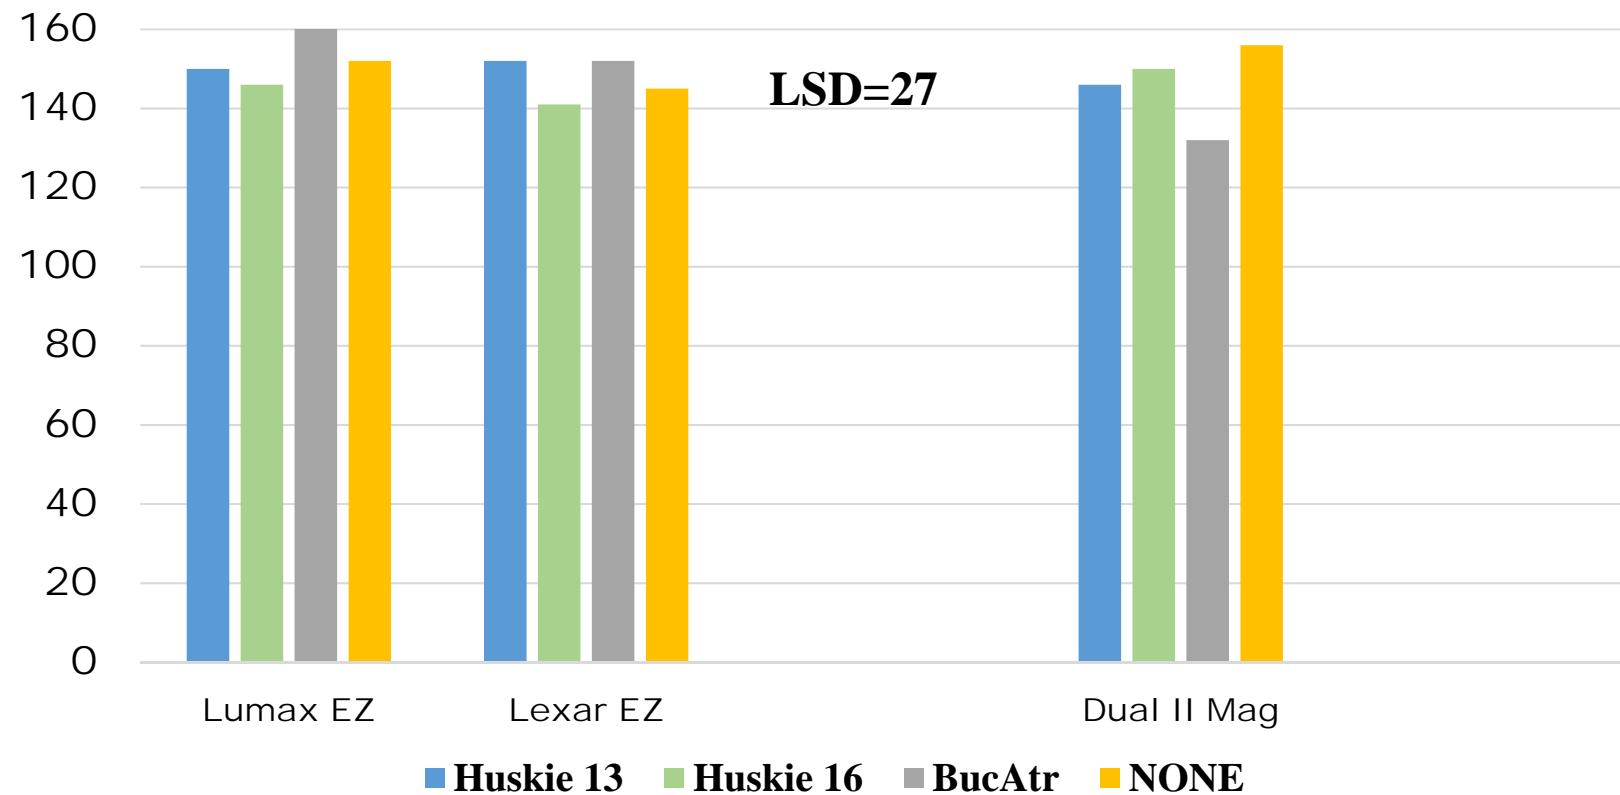

## **Statement in the Huskie label.**

- **Unacceptable crop response may occur if Huskie herbicide is applied to acreage that has been previously treated with an application of any product containing mesotrione (products such as Lumax or Lexar).**

**Effect of Huskie on sorghum previously treated with pre applied herbicides containing mesotrione, Manhattan KS.  
Menzer, Thompson, Schlegel, and Peterson. 1530sorg.**

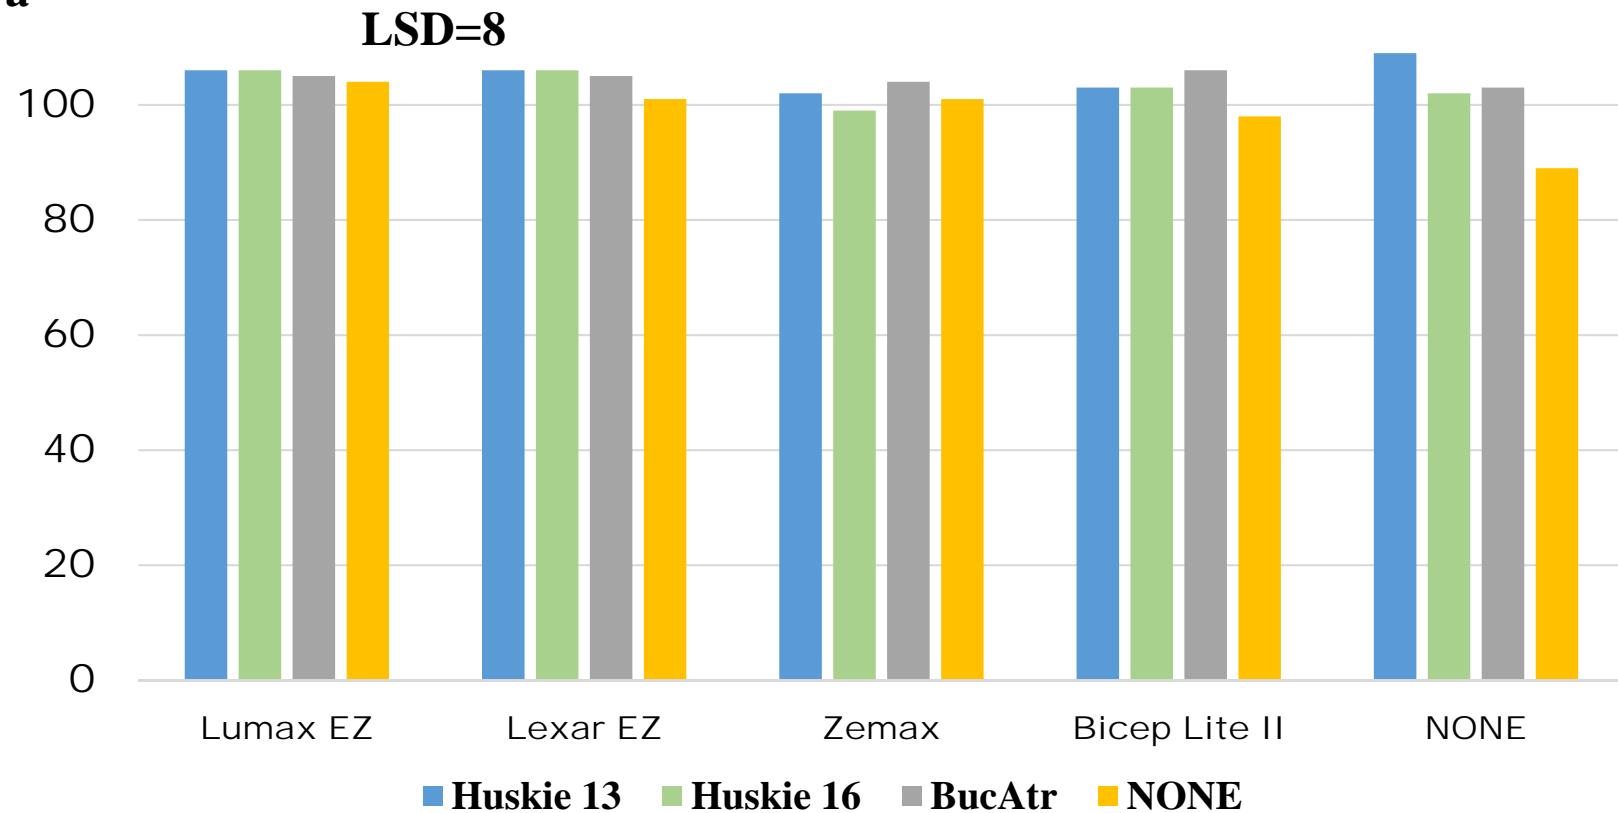

**Scenario – Great activation, significant injury from Lumax and Lexar, Palmer heavy.  
Bu/a**

**Funded by Kansas Grain Sorghum Commission**

# **Effect of Huskie on sorghum previously treated with pre applied herbicides containing mesotrione, Tribune KS. Menzer, Thompson, Schlegel, and Peterson. 1616sorgTR.**

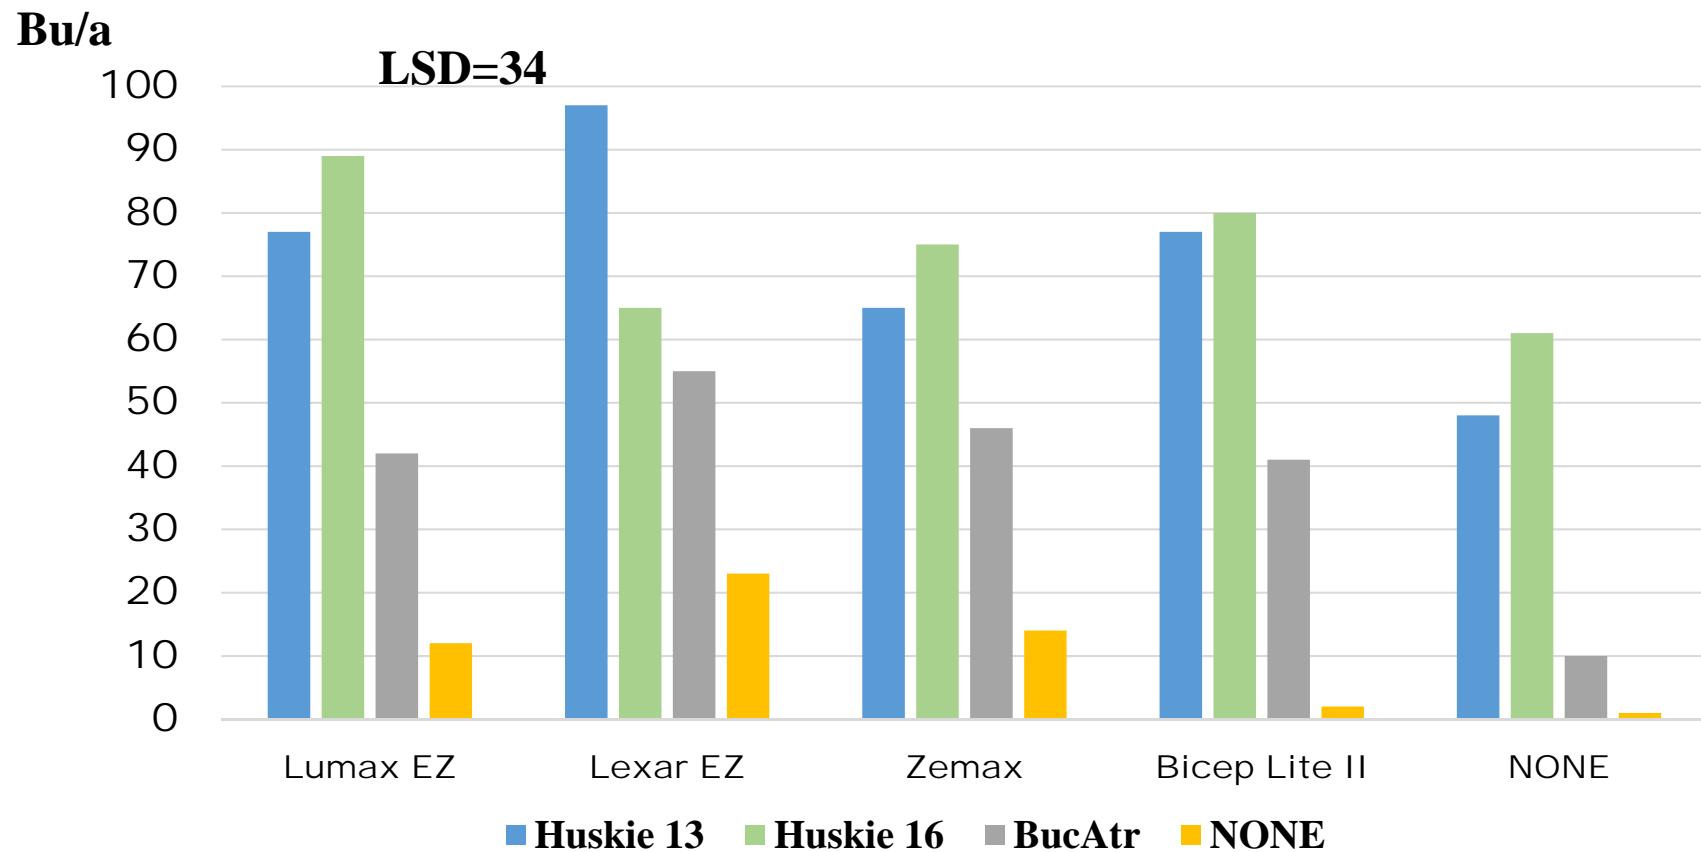

**Scenario – Great activation, slight injury from Lumax and Lexar, no weeds.  
Bu/a**

**Funded by Kansas Grain Sorghum Commission**

# **Effect of Huskie on sorghum previously treated with pre applied herbicides containing mesotrione, Manhattan KS. Menzer, Thompson, Schlegel, and Peterson. 1615sorg.**

**Scenario – No activation, no injury from Lumax and Lexar, Palmer heavy.**

**Funded by Kansas Grain Sorghum Commission**

## **Summary of the Huskie on sorghum previously treated with PRE herbicides containing mesotrione.**

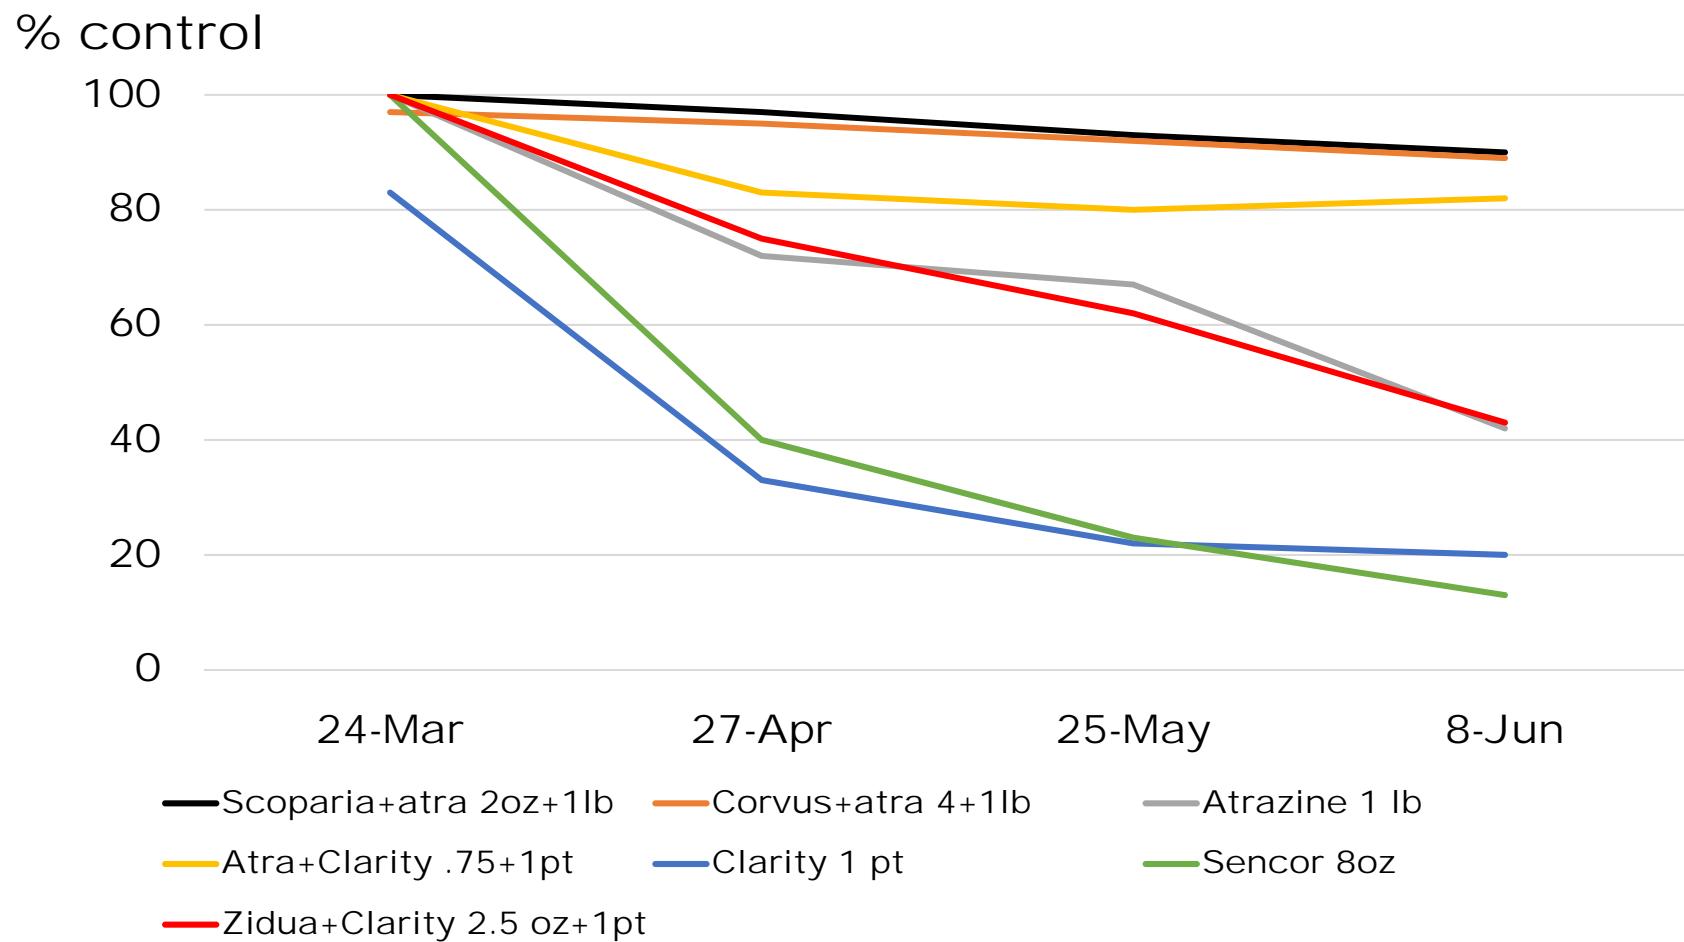

- PRE herbicide program did not appear to affect the level of Huskie injury to sorghum nor did the combination have any adverse affect on grain yield.**

## Pigweeds in Wheat Stubble

# **Glyphosate Resistant Pigweed Control in Wheat Stubble**

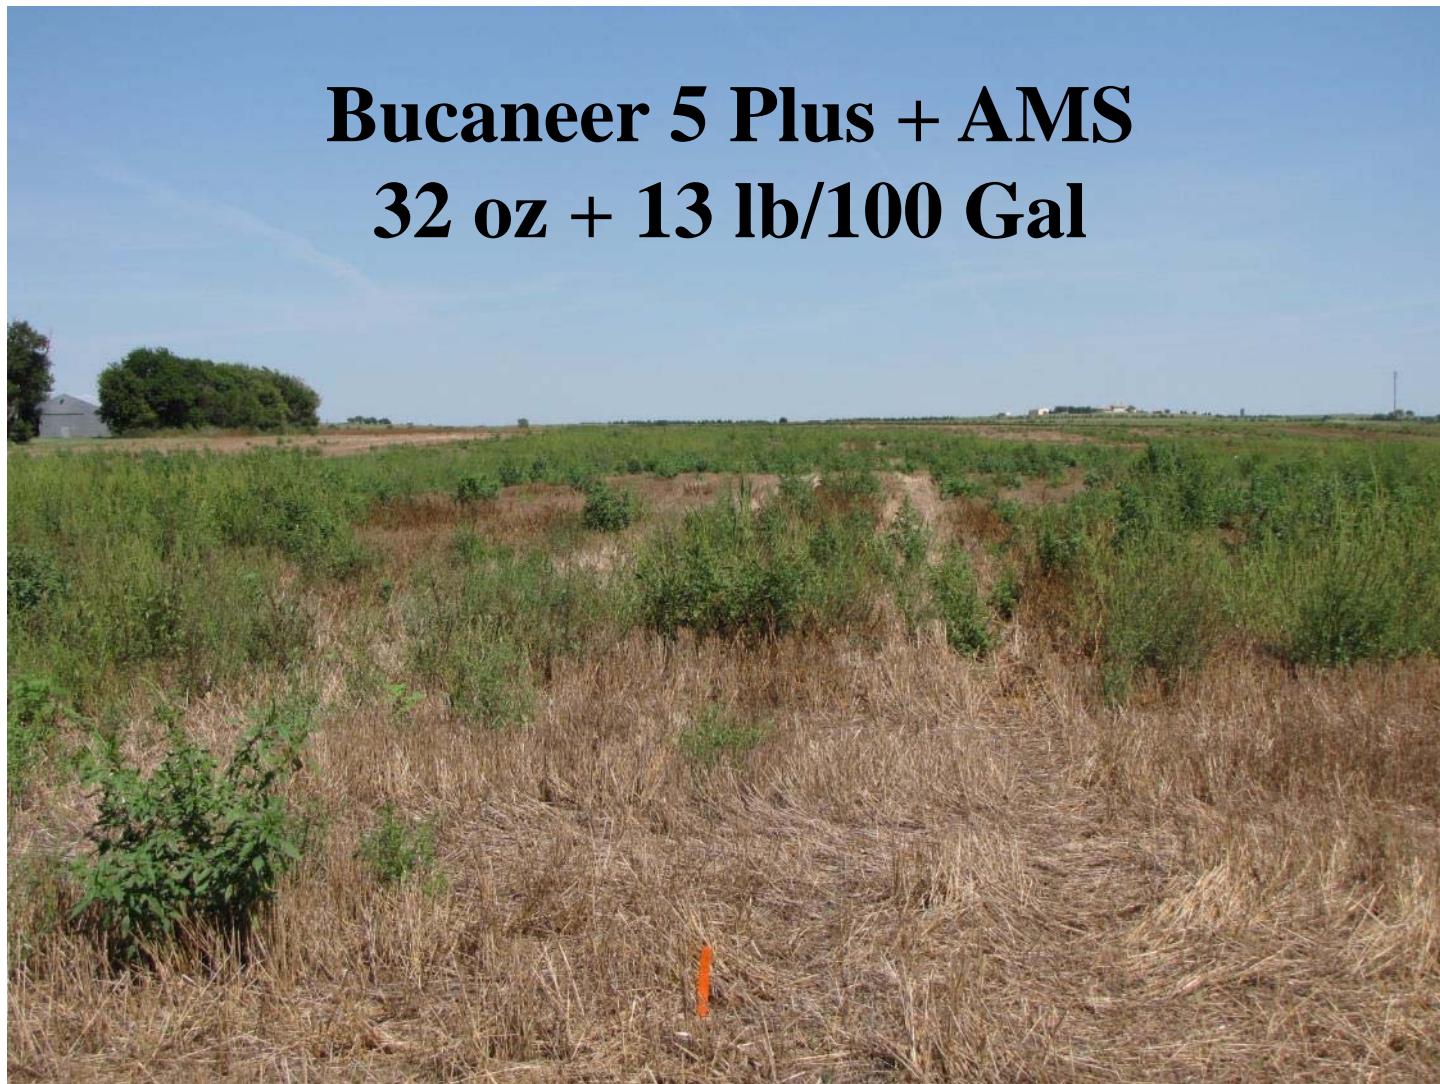

- 2,4-D and dicamba not as good as we thought on big pigweeds. Glyphosate was doing most of the work in tank-mixes.
- Timing and weed size just as important in wheat stubble as in POST treatments in crop.
- Consider Gramoxone as an alternative to glyphosate.

# Pigweed Control in Wheat Stubble Demonstration

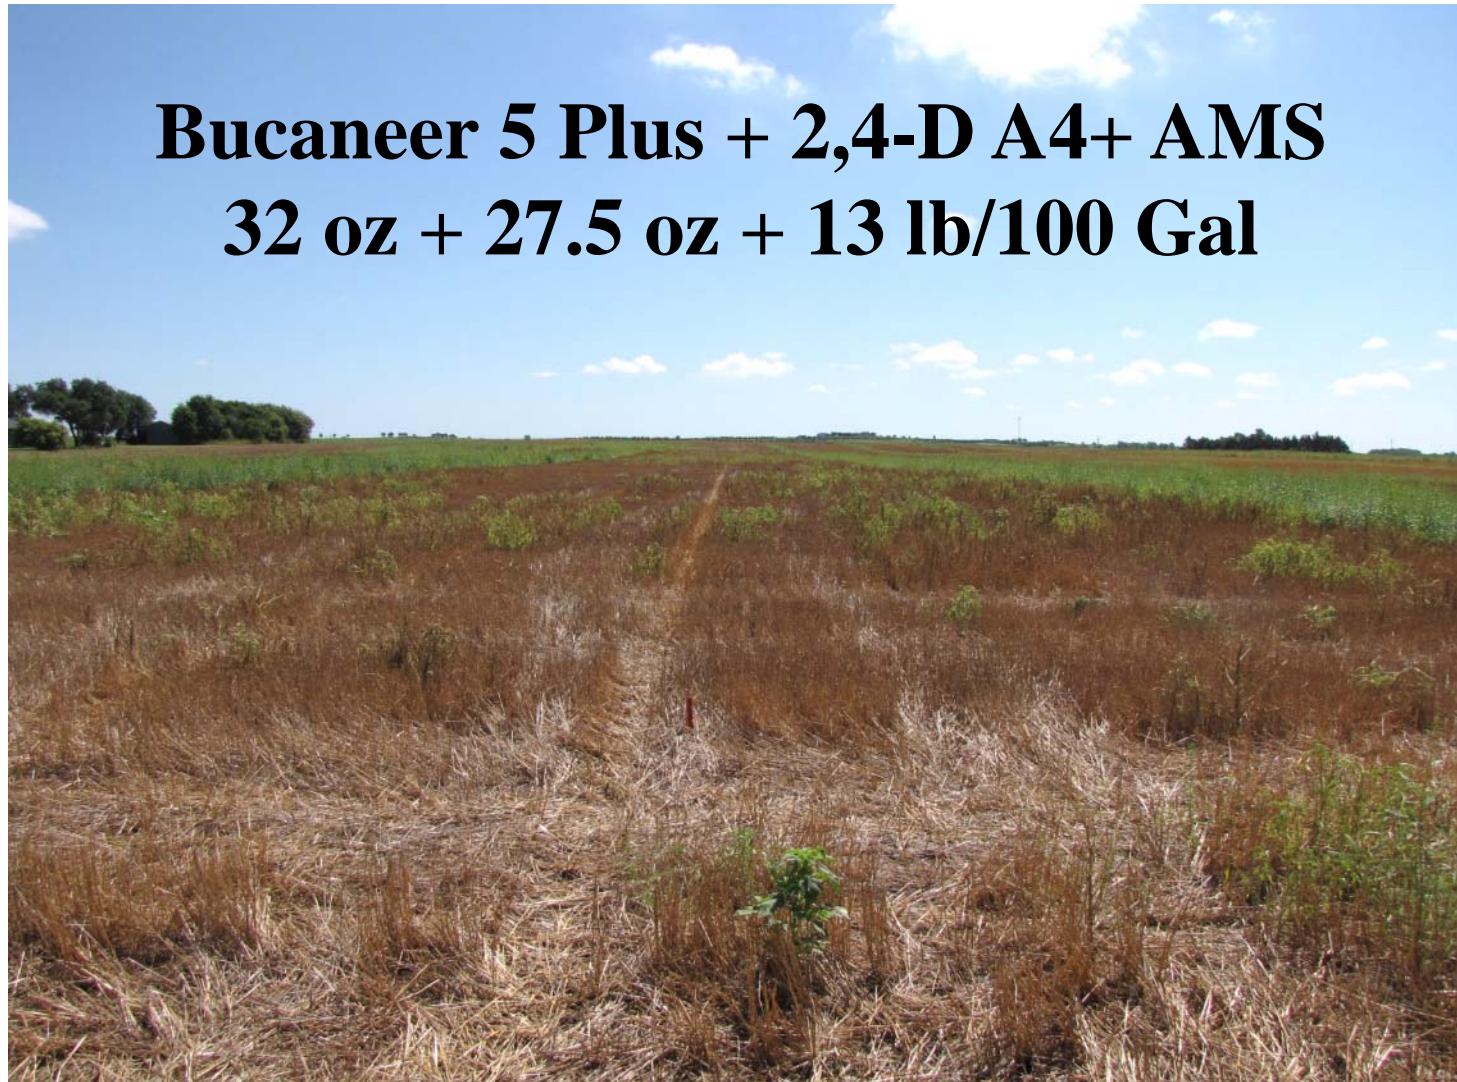

## South of Solomon, KS

32 oz + 27.5 oz + 1 oz + 13 lb/100 Gal**

**Gramoxone 2LS + NIS  
3 pt + 1 qt/100 Gal**

# Gramoxone Performance

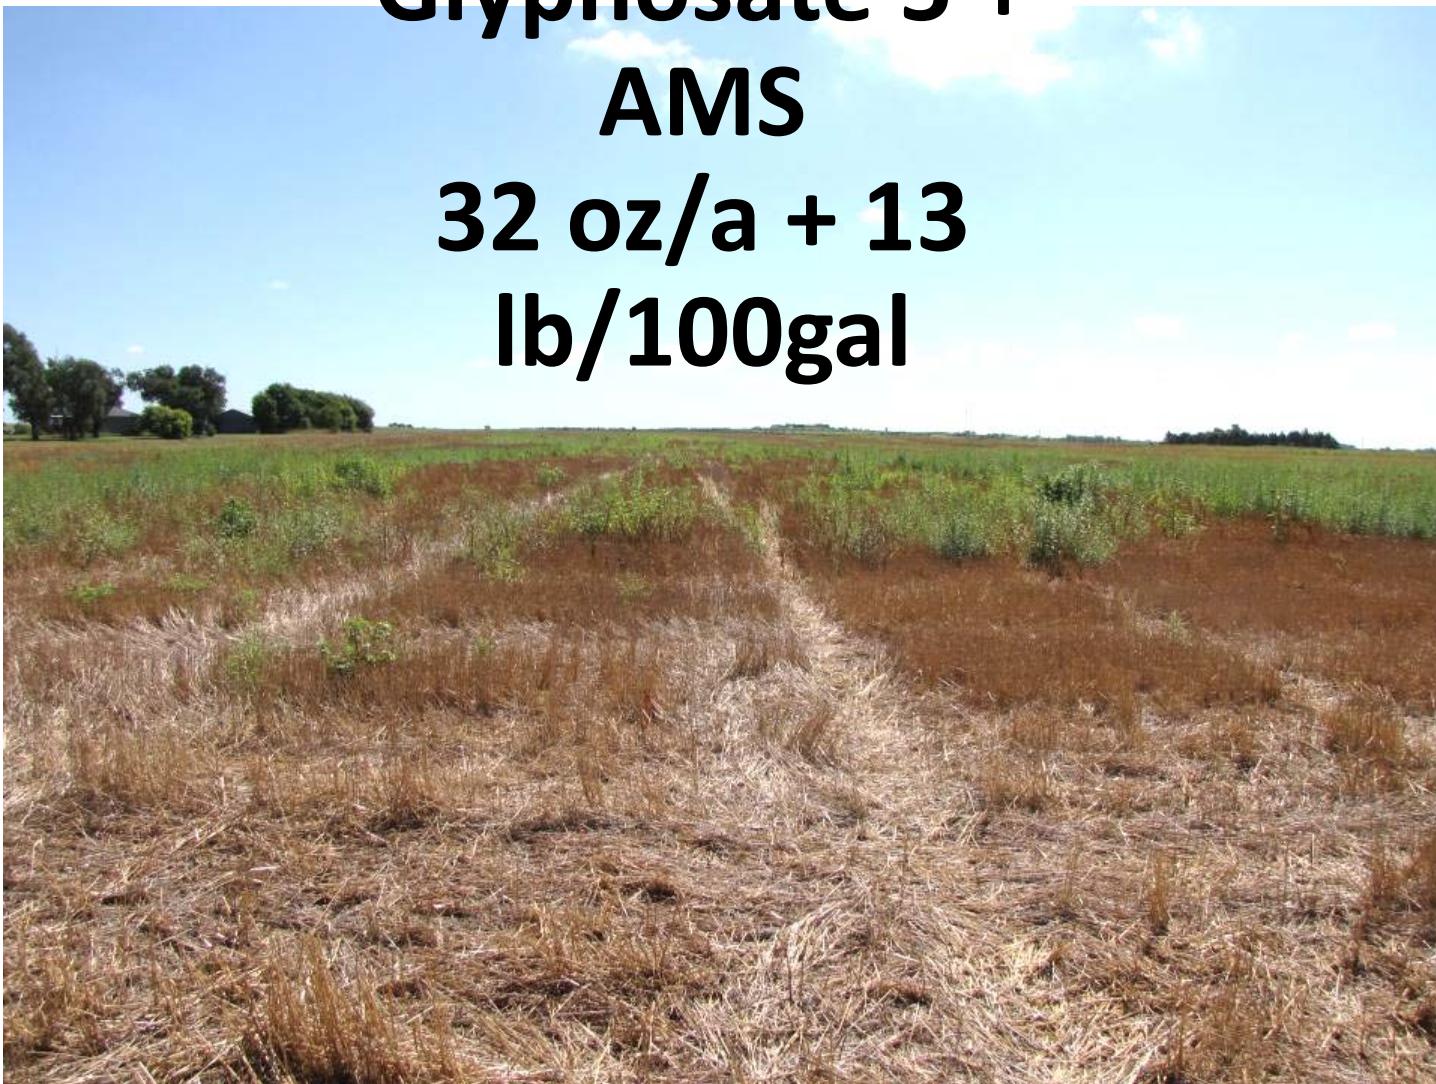

## Critical Factors

- Requires NIS or OC
- Spray coverage
  - Minimum 15 gpa
  - Avoid coarse spray
- Weed size, larger is more difficult to cover
- Enhanced by atrazine, metribuzin, or Sharpen
- Avoid spray drift

**Glyphosate 5 +  
AMS  
32 oz/a + 13  
lb/100gal**

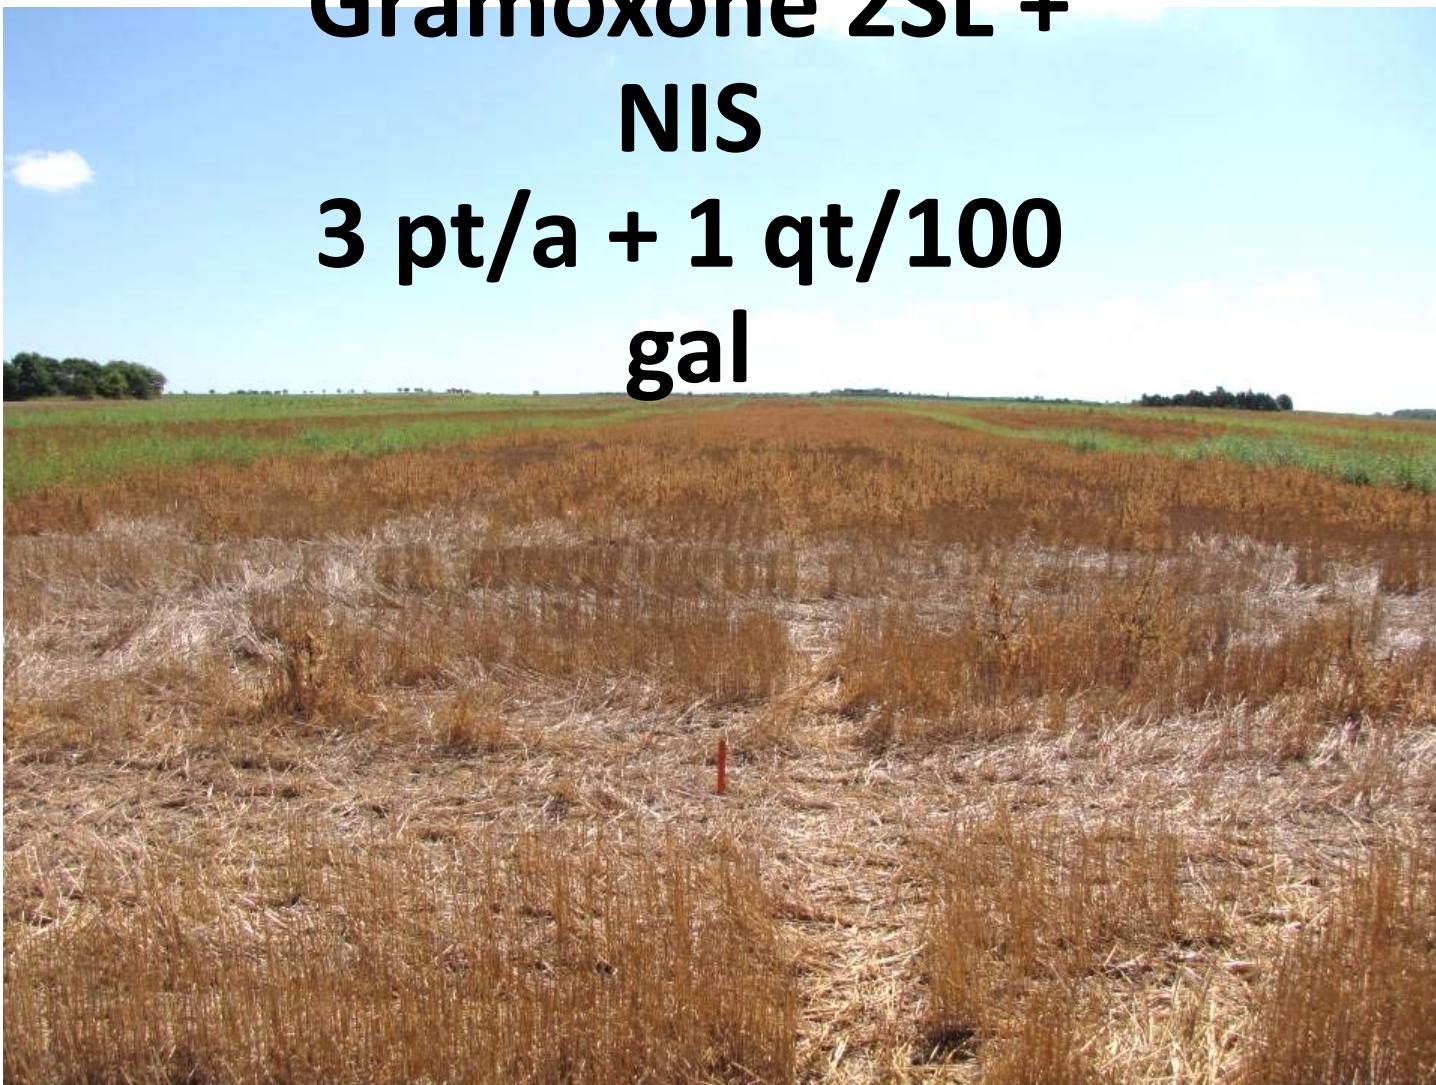

**Glyphosate 5 + 2,4-Da 4  
+ AMS

# **Wheat Herbicide Update 2015**

- **Sentrallas (DuPont)**
- **Travallas (DuPont)**
- **Quelex (Dow)**
- **Zidua**
- **Anthem Flex**

## ***Sentrallas* (DuPont) for winter wheat, barley, and oats**

- Thifensulfuron 0.25 lb ai + fluroxypyr 1.3 lb ae / gallon
- Use 7 to 14 fl oz on wheat or 7 to 9 fl oz on oats or barley for single applications. Maximum of 14 fl oz may be used on wheat and barley and 9 fl oz on oats during the season.
- Apply from 2 leaf stage but before the flagleaf is visible.
- Do not graze for 7 days, hay 30 days, grain 45 days PHI.
- Corn or sorghum may be planted anytime after application. Other crops may be planted 120 days following application.

## ***Travallas* (DuPont) for winter wheat and barley**

- Metsulfuron 0.025 lb + thifensulfuron 0.25 lb ai + fluroxypyr 1.3 lb ae / gallon
- Single use rate of 7 fl oz
- Active ingredient oz ai In 7 fl oz Max oz AI/season
  - metsulfuron 0.022 0.06
  - thifensulfuron 0.22 0.75
  - fluroxypyr 1.1 3.93
- Apply from 2 leaf stage but before the flagleaf is visible.
- Do not graze for 7 days, hay 30 days, grain 45 days PHI.
- Rotation restrictions: sorghum 4 mo, corn 12 mo, STS beans 4 mo, conv. Beans 22-34 mo west of 183 or 12 mo east of 183

# **Quelex (Dow) for winter wheat**

- New herbicide from Dow which is a premix of halaxifen (Arylex) and florasulam for postemergence control of broadleaf weeds.
- Rates:           **0.75 oz/a**
- Adds:NIS
- Timing:       **Fall or spring postemergence**
- Weeds:       **Mustards, pennycress, henbit, marestail**  
**Weak on kochia**
- Minimal Crop Rotation Restrictions
  - 3 Mo: Corn, sorghum, soybean, cotton, sunflower**
  - 9 Mo: Alfalfa, canola, mustard, peas,**

**Broadleaf weed control with spring applied wheat herbicides,  
Manhattan, KS, 2013 (Peterson&Thompson,WH200806).**

Herbicide	Rate (oz/A)	Henbit -----(% control)-----	Flix- weed	Blue mustard
Quelex+NIS	0.71	100	98	100
Quelex+2,4-D+NIS	0.71+10.5	100	100	100
Finesse + 2,4-D+NIS	0.3+10.5	94	100	100
Ally+2,4-D+NIS	0.1+10.5	90	100	100
LSD (5%)		2	1	NS

# ***PowerFlex HL (Dow) use in wheat***

- A new, more concentrated formulation of PowerFlex (pyroxsulam) from Dow AgroSciences.
- Rate: 2 oz/a compared to 3.5 oz/a of PowerFlex
- Weeds: Cheat, Japanese brome, downy brome (F), Italian ryegrass, and many broadleaf weeds.                  DOES NOT CONTROL CEREAL RYE.
- New Crop Rotation Restrictions
  - 3 months for soybeans, sorghum, cotton, and sunflower
  - 9 Months for most other crops.
- Can be applied with liquid nitrogen fertilizer as part of the carrier, but at a maximum of 50% of the carrier solution and no more than 30 lb of actual N per acre.
- Do not tank mix with products that contain dicamba (Banvel) or amine formulations of 2,4-D or MCPA or reduced grass control may occur.

## Grass control in winter wheat at Manhattan, KS in 2012 (Peterson and Thompson).

Herbicide	Rate	Timing	Downy brome	Cheat	Ryegrass
	(oz/a)			-----(%)-----	
PowerFlex HL	2	FP	84	100	100
Olympus	0.9	FP	86	100	60
Maverick	0.67	FP	90	100	88
PowerFlex HL	2	SP	60	100	100
Olympus	0.9	SP	60	100	35
Maverick	0.67	SP	55	100	60
LSD (5%)			14	NS	14

## **Zidua (BASF) in wheat**

- Now labeled for delayed preemergence or early postemergence application in wheat for residual control of Italian ryegrass and cheatgrass suppression.
- Rates:        0.7 to 1.25 oz/acre Delayed Pre 1 to 2 oz/acre Early Post
- Timing: after 80% of germinated wheat seedlings have  $\frac{1}{2}$  inch shoot through 4 tiller
- Does not control emerged weeds
- ?possible residual control of early germinating kochia?

## *Anthem Flex (FMC) for wheat*

- New premix of Zidua + Aim from FMC labeled for delayed preemergence or early postemergence application in wheat for residual control of Italian ryegrass and cheatgrass suppression and postemergence control of certain winter annual broadleaves.
- Rates: 2 to 4.5 oz/acre depending on soil type
- Timing: after 80% of germinated wheat seedlings have  $\frac{1}{2}$  inch shoot through 4 tiller
- Does not control emerged grasses
